

Executive Summary

Data Analytics Internship – ApexPlanet

Project Title: Sales Analysis using the Sample Superstore Dataset

Project Overview

The objective of this project was to analyze retail sales data, extract business insights, build interactive dashboards, perform statistical analysis, and automate the data processing workflow.

The project was completed using **Python, SQL, Power BI, and Machine Learning** techniques.

Tools Used

- Python
 - Pandas
 - NumPy
 - Matplotlib
 - Seaborn
 - SQL (SQLite)
 - Power BI
 - Scikit-learn
-

Dashboard Screenshot

Top 5 Business Insights

1. Technology products generated the highest overall sales.
 2. The West region contributed the highest sales among all regions.
 3. California was the top-performing state in terms of sales.
 4. Sales showed monthly fluctuations, indicating seasonal purchasing patterns.
 5. Customer segmentation identified different purchasing behaviors, enabling targeted marketing strategies.
-

Business Recommendations

- Focus marketing efforts on high-performing regions and customer segments.
 - Improve inventory planning using sales trend analysis.
 - Promote high-profit products to increase overall profitability.
-

Project Outcome

This project successfully demonstrated the complete data analytics workflow, including data cleaning, SQL querying, dashboard creation, statistical analysis, customer segmentation, predictive modeling, and automation. The insights generated can support better business decision-making and strategic planning.
